

**MEMO**

NEW JERSEY STATE DEPARTMENT OF ENVIRONMENTAL PROTECTION

0962

TO John Castner, Chief, Bureau of Sanitary Landfill Closure,
Division of Waste Management
FROM ^{DS} Peter Sugarman THROUGH W. Brown, M. Morris, DATE MAY 03 1983
J. Trela, Chief, Bureau of Ground Water Discharge Permits
SUBJECT City of Bayonne Landfill Closure, Hudson County,
Facility Registration Number 090PA

The following memo addresses our position on the ground water conditions at the City of Bayonne Landfill in regards to their closure plan. The City of Bayonne has installed five (5) ground water monitoring wells at their facility at the locations and specifications requested by this Bureau. In addition, they have completed one initial sampling of the wells for the specific parameters we requested.

An Interim Initial NJPDES permit outlining a sampling program for the five (5) ground water monitoring wells will be sent to your office in the near future for your review and comments.

At the present time we have no objections to the closure plans provided for this site provided by your office, as long as a valid NJPDES permit is issued for this facility.
